Building laboratories for education one at a time

## WHAT WE DO:

Labdoo is a collaborative humanitarian social network which is designed to help bring laptops and educational devices to schools in need.

In the world, those who have access to the free sources of education (FSE) are the rare exception. This leads to inequalities between those who have access to FSE and those who don't.

Labdoo laptop allows schools to gain access to these free sources of education, empowering them to unlock the skills and potential capabilities of children and students. This is achieved via offline education software that comes installed in the laptops or through online educational content.

Labdoo exists as 'a tool' to help sustainably coordinate the mobilization of unused educational devices and to bring them to schools using global collaboration, without incurring any economic cost and without damaging the planet.

## WHAT YOU CAN DO:

**Donate laptops.** We need more laptops to repurpose. If you know of any laptop resources or have some old laptops taking up space somewhere, consider donating them to a local hub.

**Travel.** If you or someone you know is travelling out of the country in the near future, bring a laptop with you to a nearby school, where the laptop will further the education of children. If you are travelling to a location near an school, you can register a trip from the Labdoo website, [www.labdoo.org](http://www.labdoo.org).

**Spread the word.** Every year, the world throws away hundreds of millions of perfectly usable electronics which could otherwise be repurposed. If you have a friend with an old laptop, let them know about Labdoo and the possibilities contained within their old device.

## 5 STEP PROCESS

We utilize a 5 step process to make contributing to Labdoo and spreading education both easy and simple.

1. **Tag your dootronics.** We label and enter the electronic device into our global inventory.
2. **Sanitize your dootronics.** All data is securely erased from the old electronic device and the educational software is loaded onto it.
3. **Identify a dootrip.** Once the dootronic is sanitized, we need to identify a CO2-neutral traveling resource that can bring it to a school. We call this type of transportation resource dootrip (as in Labdoo trip). The dootronic is carried as luggage by someone who is already travelling to the destination area.
4. **Track your dootronics** towards 'mission accomplished'. You can track the progress your dootronic makes towards reaching a school through our website, [www.labdoo.org](http://www.labdoo.org) (you will need an account for this).
5. **Recycle broken dootronics.** Eventually, all things break, and dootronics are no exception. When this occurs, they are sent back to a recycling center on the next dootrip.

The Stages of Dootronics
