

Hello,

As you said, the school NET project is a big project to fight computer illiteracy in order to reduce the digital divide in Togo. This project also contributes to the achievement of quality education for all in order to contribute to the achievement of the Sustainable Development Goals (SDGs).

EAS needs partners who have similar vision like you. We are in the first phase of the project. This phase brings together five sites throughout the Togolese territory. The number of eBook readers we have presented to you is real. It's not a fiction. It is the set of high school students learning on the five sites.

I am the president of the School Association, Safe Future (EAS); I am also the coordinator of the School NET project. All the information I give you is without suspicion. I'm talking about what we do on the ground.

Our Learners are on vacation. We resume training next September. However, the Executive Office of the association and the coordination of the project are in the process of approaching the partners and honest men volunteers to negotiate computers for the other sites at the beginning of the next school year. This is an opportunity for us to discuss the search for other credible partners like Labdoo. We will be very grateful if you agree to be a relay station for School NET in the USA.

In fact, it would be a mistake to say that Labdoo and EAS can not work together because of the size of the project. We need for this first phase of the project, 308 Computers. But Labdoo does not have to find the 308 computers if it does not have one. We dare to believe that if today you find us a computer, we will have 307 Computers to look for tomorrow. And as it is already a good step for the success of this project.

As for your application for 08 laptops for high school Tsévié I, we agree. That's what you can. This is already a good start for our partnership. Only to these 08 requested computers I added 04 tablets for the practice of the play sessions in the computer room. However if this is not possible you can remove the order from these tablets.

You will find attached our new application for computers.

I would like to address the other points of your concerns:

√ Yes we have a facebook page where we published our images as I sent you. But the information is no longer updated.

√ By the way, our traveler is a Togolese who lives in New Jersey. It makes the goods travel by sea transport. It is a professional activity that he exercises. When he will deliver us to Lomé, we will in return pay him the costs of transporting the computers. He gave us the schedule of the trip. Before he had offered us the month of June and I told him it's too close to collect 308 computers. According to him the duration of the trip is from 02 weeks to 03 weeks if there is no delay. That's why it gives 01 months as

delivery time so that the goods are within the deadline even if there is delay.

√ He told me that he actually travels 02 containers a month. The first from the 18th of the month and the second at the end of the month.

I have my little brother who also lives in New Jersey. He knows our traveler well.

√ Our traveler has the habit of going to cities to collect parcels for his trip. He will pick up the computers at your home in Manhattan. My little brother also reassured me that your Hub is not far from New Jersey and if the traveler is busy elsewhere when the time comes, he can come in his place.

√ Proposal

I would like to bring the trip back to July 31st because there are not many computers available. If you agree with me, write to me so that I can contact the traveler to change the schedule.

√ You will see as an attachment the screenshot of the GPS coordinates.

If it's not always correct, try searching in Google Maps the name: Tsévié High School 1

If by chance I forget a point, I beg you, do not hesitate to write to me. I am always available.

Finally, I note that we have not yet recruited a staff with good English skills at the moment; But we will make an effort to look for it in the years to come.

*Regards,
Olver*
